BOOKWORM

Bringing Books with Ease

ABOUT

Welcome to Bookworm: Library Tracker, the ideal solution for efficient library management. Bookworm, designed with librarians and readers in mind, makes it easier to track and manage borrowed books. Our simple system allows you to easily create, update, and delete borrowers' data, ensuring that every book is accounted for and easily retrievable.

Bookworm was developed to overcome the issues of traditional library management, where human record-keeping frequently results in errors and inefficiencies. Our tracker allows you to keep track of who has borrowed which books and when they are due back. This not only improves library organization, but it also delivers a better experience for borrowers, allowing them to enjoy a smooth and reliable borrowing process.
